

A scatter plot on a white background with a black border. It displays three clusters of data points, each represented by a different color: red, green, and black. The red cluster is located on the left side of the plot, consisting of approximately 30 points. The green cluster is in the center, with about 25 points. The black cluster is on the right side, containing roughly 25 points. The points within each cluster are spread out, showing some internal variance, but the clusters themselves are well-separated from each other.
